Project generated publications:

Salon, Paul and Martin vander Grinten 2009. Biofeedstock yield, quality and cell wall components of tetraploid ‘Meadowcrest’ eastern gamagrass under varying nitrogen levels. American Society of Agronomy national meeting,, Houston TX. 10/5-9/08. 1p.(abstract and poster)

In addition to these publications our project is also in the process of putting together a final information package on perennial grass production for NYS. Fact sheets for the individual grass species will be produced. Materials will be available on the Forage Project Plant Breeding website (http://plbrgen.cals.cornell.edu/cals/pbg/programs/departmental/forage/).
